Page Fluffers

What's a Page Fluffer?

Page fluffers are simple adaptations made to books or other reading material that make pages more accessible to turn. A "fluffer" is glued, taped, or clipped to the corner of each page. The "fluffer" puts spaces between each page allowing those with limited fine motor skills to get their fingers between each page. Page fluffers are helpful in fostering independent literacy skills.

Page fluffers are placed on the top of the first page, a little bit lower on the second page, lower on the third page and so on. When you reach the bottom of the page you start over at the top of the next page.

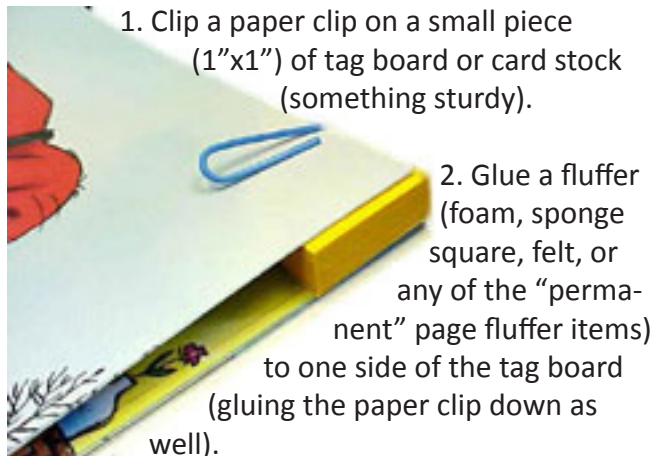

Make Permanent Page Fluffers:

Adhere any of the following to your book pages:

- Female Velcro (peel and stick).
- Rubber weather stripping with adhesive back (peel and stick)
- Picture frame dots (peel and stick)
- Beads of fun foam (dried)
- Beads of puff paint (dried)
- Foam of any type (hot glued)
- Packaging peanuts (hot glued)
- Popsicle sticks (or other study material) to the pages so one end sticks out beyond the pages like tabs (hot glued)
- Furniture protectors (peel and stick)
- Soda bottle caps (hot glued)

Make Removable Page Fluffers:

1. Clip a paper clip on a small piece (1"x1") of tag board or card stock (something sturdy).
2. Glue a fluffer (foam, sponge square, felt, or any of the "permanent" page fluffer items) to one side of the tag board (gluing the paper clip down as well).

3. Clip the material on the pages for an easy non-permanent solution!
